PRODUCT DISCONTINUED – FOR INFORMATION ONLY

9-in-1 reader makes
mobile life easier.

Conveniently exchange data, photos, games and music stored on memory expansion cards between mobile phones, computers, laptops, cameras, PDAs and other devices with Kingston's MobileLite Reader. Designed with a USB connector and memory expansion slots that take nine different types of SD and MMC Flash memory cards, MobileLite lets users carry a single device to store, transfer or read data on any USB host device while using a variety of Flash cards for mobile phones, digital cameras and other devices.

Ideal for personal or professional use, MobileLite is an essential part of your mobile gear — it's ultra-portable, plug and play and requires no external power source. MobileLite requires no additional card adapters and uses both of its sides as expansion slots. The slot on side A supports SD/SDHC, MMC, MMC*mobile*, RS MMC and MMC*plus* card formats. The slots on side B support microSD/microSDHC, MMC*micro* and miniSD/miniSDHC card formats. When in use, MobileLite appears as three drive letters (i.e. G:\, H:\, I:\) and data transfer is as simple as drag and drop.

On the road, the MobileLite Reader uses the storage capacity of your preferred card, and allows you to easily connect to the content you want when using it at a business center or Internet café computer.

MobileLite Reader is the ideal companion for the SD/MMC cards you own or combine it with a purchase from Kingston's range of Flash card solutions. Backed by a two-year warranty and Kingston's legendary service and support, MobileLite is the one device you won't want to be without while on the road.
